

VINOTH M

VAPT Analyst — Ethical Hacking & Penetration Testing

Tirunelveli, Tamil Nadu | +91 9360749717 | vinothjpv@gmail.com | linkedin.com/in/vinothcyberstudent |
github.com/vinoth12-2005 | portfolios-vinoth.vercel.app

PROFESSIONAL SUMMARY

Cybersecurity-focused Computer Science graduate (Cyber Security specialization) seeking a VAPT Analyst role. Builds and applies offensive-security tooling for reconnaissance, vulnerability discovery, and web application testing, backed by daily hands-on lab practice with Burp Suite, Wireshark, Nmap, and Metasploit. Strong grounding in OWASP Top-10, network security, and Linux administration, with proven ability to design automated security scripts in Python and Bash.

CORE COMPETENCIES

VAPT & Ethical Hacking	Vulnerability Assessment and Penetration Testing, OWASP Top-10, Web Application Security, Reconnaissance & Enumeration
Security Tools	Burp Suite, Nmap, Wireshark, Metasploit, Kali Linux
Programming & Scripting	Python, JavaScript, Bash Scripting
Networking & Forensics	TCP/IP, Network Protocols, Digital Forensics, Network Forensics, Linux Administration
Practice Discipline	Daily hands-on lab practice across reconnaissance, scanning, exploitation, and reporting workflows

EDUCATION

B.E. — Computer Science & Engineering (Cyber Security) 2022 – 2026

Dhanalakshmi Srinivasan College of Engineering & Technology, Chennai — Anna University | CGPA: 7.54

Higher Secondary Certificate (HSC)

Vivekananda Vidhyashram Matric Hr. Sec. School, Tirunelveli

PROJECTS & TECHNICAL EXPERIENCE

ReconX — Advanced Cybersecurity Reconnaissance Platform 2026

github.com/vinoth12-2005

- Built a modular CLI reconnaissance tool in Python and Bash automating the full recon pipeline: subdomain enumeration, live host detection, port and service scanning, technology fingerprinting, and vulnerability checks.
- Implemented active and brute-force subdomain discovery with DNS resolution, HTTP/HTTPS live-host probing, and banner-grabbing port scans across common and extended port ranges.
- Added technology-stack detection, vulnerability scanning (headers, CORS, SSL, exposed files, open redirects), DNS/WHOIS enumeration, and endpoint/parameter discovery for deep crawling of target domains.
- Included a Google dorking helper and GitHub repository search modules to surface public leaks and exposed source code as part of OSINT reconnaissance.

Debugging Challenge Platform — Department Technical Event 2025

github.com/vinoth12-2005/VULnix2.0-debug-challenge

- Built an interactive debugging platform (Python, C, Java) used by 50+ participants.
- Developed front-end UI, back-end logic, and automated test-case management.

Secure Conference Management System — Full-Stack Web Application 2025

github.com/vinoth12-2005/conference-management-system

- Built a multi-layer system with authentication and SQL injection prevention.
- Applied OWASP Top-10 security practices with responsive front-end development.

CERTIFICATIONS

- Cybersecurity Fundamentals — IBM SkillsBuild (Jul 2026)
- Advanced Ethical Hacking in Tamil — GUVI / HCL (2026)
- Mobile Application Security — Skill-Byte (2025)
- Network Security: Mastering Cybersecurity & Ethical Hacking — Udemy (2025)
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate — Oracle University (2025)
- Encoder-Decoder Architecture — Google Cloud / Simplilearn SkillUp (2025)

ADDITIONAL INFORMATION

Languages: English, Tamil

Key Interests: Penetration Testing, CTF Competitions, Network Forensics, Open-Source Security Research
